Healthcare/Business
IT Systems Support

For over 50 years, CACI has used a deliberate systems engineering and integration approach to meet our customers’ most challenging information management requirements. As a $3.6B Fortune 1000 company, CACI employs more than 14,000 highly-skilled professionals and operates more than 120 offices worldwide. We deliver IT and network services; data, information, and knowledge management services; business system solutions; logistics and material readiness; C4ISR integration services; cyber solutions; integrated security and intelligence solutions; program management; and Systems Engineering and Technical Assistance (SETA) support services.

Numerous CACI business groups are certified at Maturity Level 3 of CMMI v1.2 by an SEI-authorized Lead Appraiser. CMMI is the industry-recognized model designed to measure the maturity of software and systems engineering development. CACI was the first contractor to be ISO 20000 certified and we continue to acquire these certifications in our organizations and projects with an IT implementation, operations, and maintenance focus.

The industry-recognized standard for enhanced efficiency and cost effectiveness for IT service management, ISO 20000 is the quality benchmark that assures that we offer customers clear criteria to assess service levels, measure performance, and implement continuous improvement.

CACI has designed, developed, and supported feature-rich systems that enhance the effectiveness and efficiency of the Department of Defense (DoD) workforce. Highly successful and universally used systems such as Wide Area Work Flow and the Standard Procurement System are CACI products. For the past 14 years, CACI has specialized in support to the Military Health System (MHS). CACI’s team of healthcare IT professionals partner with customers to develop, deploy, and maintain mission-essential applications that ensure the health and welfare of our military men and women and their families.

Environmental Safety and Occupational Health

CACI provides worldwide application implementation; software engineering and development; global help desk support; training modules development; and applications training for the Air Force’s Enterprise Environmental Safety and Occupational Health System (EESOH). CACI IT professionals assist in the transformation of the Air Force’s approach to managing Environmental, Safety, and Occupational Health (ESOH) data worldwide by eliminating distributed, disparate, and incompatible databases, processes, and operating instructions. These are replaced with a single standards-based, certified, accredited, and scalable solution running on the Air Force portal.

Defense Medical Logistics Standard Support

CACI is the industry leader in supporting the operational and IT needs of the DoD healthcare logistics community. We are the lead functional support contractor for the Defense Medical Logistics Standard Support (DMLSS) system. CACI also provides the software development and sustainment support incorporating the Army’s Theater Enterprise-Wide Logistics System (TEWLS) into the DMLSS system. This work involves software development, testing, and documentation support.
Defense Medical Surveillance System

The Defense Medical Surveillance System (DMSS) maintains current and historical medical and demographic data for DoD. This data is used to satisfy ad hoc and recurring requirements for epidemiologic analysis, reporting, and public health investigations. DMSS is operated by the Military Health System's Armed Forces Healthcare Surveillance Center (AFHSC).

CACI personnel maintain and enhance the medical surveillance activities and products of AFHSC. CACI also maintains and enhances the AFHSC information processing environment. Our experts ensure the continued operation and maintenance of the Government-Owned Contractor-Operated (GOCO) equipment located at AFHSC facilities in the National Capital Area.

Standard Automated Medical System

CACI developed and maintains the Shipboard Automated Medical System (SAMS) which is in use at over 1,100 sites in the Navy and Marine Corps, both ashore and afloat. SAMS is a core application of the Theater Medical Information Program (TMIP).

Health Services Data Warehouse

CACI supports the Air Force Medical Service in its efforts to develop and maintain a Health Services Data Warehouse (HSDW) and associated data marts in order to consolidate databases and transition to a Service-Oriented Architecture (SOA).

TRICARE Certification and Accreditation

CACI provides security management, technical support, and DoD Certification and Accreditation (C&A) for MHS/TRICARE Management Activity (TMA) Directors and TRICARE contractor Automated Information System (AIS) assets. DoD C&A requires a technical and physical security evaluation of AIS security safeguards, including a qualitative assessment of the potential security risks to the configuration’s operational system and the countermeasures implemented for the AIS and its environment.

Department of Veterans Affairs Virtual Lifetime Electronic Record

CACI is the prime contractor of the Department of Veterans Affairs (VA) Virtual Lifetime Electronic Record (VLER) development initiative. VLER is an across-the-board solution to share the electronic records of Armed Forces members across the VA, DoD, and private healthcare sectors. The objective is to provide a single, coherent, and virtual lifetime electronic record using a data-centric common services approach based on national standards. In this regard, VLER will provide for the exchange of health, benefits, and personnel data within a secure, reliable, and timely framework that safeguards each patient’s Personally Identifiable Information (PII) pursuant to HIPAA, NIST, and FIPS standards.

Other Department of Veterans Affairs Support

CACI personnel provide metadata services to support the VA Office of Business Intelligence in its decision making and performance measurement needs. Through our systematic analysis planning, budgeting, and execution of IT investment skills, our personnel provide VA IT portfolio management services. Our VA eBenefits Interagency web portal support provides information and online transaction capabilities to service members, veterans, and their advocates and caregivers.

We support the VA/DoD Defense Personnel Records Imaging System through development and implementation of an automated interface to exchange information between the VA’s Personnel Information Exchange System and the Defense Personnel Records Imaging System.
