CACI is a major provider of DoD healthcare logistics support. From our long-term involvement in the functional sustainment and software development of Defense Medical Logistics Standard Support (DMLSS) to our hands-on day-to-day medical assemblage operations, we provide medical logistics support to customers across the globe. With over 300 medical logistics experts on staff, we partner with our customers to fulfill all requirements to support this vitally important component of the Military Health System (MHS).

**Defense Medical Logistics Standard Support (DMLSS)**

Team CACI is a key component in the functional design, development, and deployment of solutions for the DMLSS system. The DMLSS Automated Information System (AIS) is a Joint Readiness Oversight Council (JROC)-approved, DoD standard system that has been deployed worldwide to enhance healthcare delivery in peacetime and promote wartime readiness and sustainability. CACI provides worldwide DMLSS development and sustainment, systems administration support, systems administration training, testing support, tier 3 help desk services, and data mining support.

CACI is also providing the software development and maintenance support incorporating the Army’s Theater Enterprise-Wide Logistics System (TEWLS) into DMLSS. This also involves testing and documentation support. We are very proud to be a key contributor to this award-winning program.

**Manpower and Equipment Force Packaging (MEFPAK) and Medical Logistics Support Services**

CACI provides the Air Force Medical Operations Agency (AFMOA) with Air Force War Reserve Materiel (WRM) industrial operations and in-garrison maintenance at 24 staffed sites located throughout the Contiguous United States (CONUS). Our medical logistics experts order, receive, assemble, pack, and ship medical assemblages for the Air Force, Air National Guard, and Army. Additionally, CACI teams travel from designated CONUS hub locations to 52 smaller Air Force, Air National Guard, and Air Force Reserve bases to conduct inventories, upgrade assemblages, re-pack, and seal assemblages. In addition to these tasks, CACI also:

- Provides fully-qualified and experienced MEFPAK support teams to evaluate and formulate an integrated logistics plan to sustain medical technology in use by the Air Force Medical Service.
- Builds portable assemblages that utilize supplies in the lowest unit of measure (LUM) for all Air Force medical units and resupplies these units when they are deployed.
• Provides support to the Theater Lead Agent for Medical Material (TLAMM) function for USSOUTHCOM.

• Supports the Reachback and Sustainment Support Function, which provides a single resupply point for any Air Force-deployed medical unit worldwide. And we continue to provide resupply until the deployed unit establishes a DoD logistical supply chain.

• Manages all ECME Information Management/Information Technology (IM/IT) assets that are a component of assemblages. This includes hardware and software that is intended to facilitate the transfer of medical information throughout the theater of operations for deployments.

**Patient Movement Item Program**

CACI supports the Air Force’s Patient Movement Item (PMI) Program. The program is designed to support in-transit patient care capability and movement without removing equipment from patients. The system exchanges like-kind PMI without degrading medical capabilities and provides prompt recycling of PMI, thereby providing a seamless in-transit patient and equipment management process from initial entry into the Aeromedical Evacuation (AE) system to the final destination.

**Medical Facility Management**

CACI provides planning, programming, and execution of cost-effective Defense Health Program unspecified medical facility minor construction projects and the Sustainment, Restoration and Modernization (SRM) Upgrade Program to support Military Treatment Facilities for the Air Force Medical Support Agency (AFMSA) Health Facilities Division. Our personnel provide technical engineering services and functional design guidance for major building systems. Based on our longstanding DMLSS support and expertise, as well as our industry-leading medical logistics experience, the Air Force Health Facilities Division contracted with CACI to sustain long-term improvements in the utilization of the DMLSS Facility Management module. We provide highly diverse on-site support at locations including 61 CONUS MTFs, 12 OCONUS MTFs (PACAF and USAFE), as well as staffs at Fort Detrick and AFSMA. CACI personnel standardize business processes; provide necessary support to MTF Facility Managers; play a major role in future DMLSS improvements and enhancement; and develop the capability to obtain reliable medical facility data to enable facility, MAJCOM, and Air Staff program managers to effectively administer Air Force SRM programs.
