

New FedSelect® v.4.0

Quickly Improves Your Source Selection Process

FedSelect® is a dynamic and forward leaning software tool that easily guides proposal evaluators through electronic evaluation forms to document proposal strengths, weaknesses, clarifications, and deficiencies, and enables evaluators to clearly document sound, justified ratings and rationales.

The FedSelect® design is founded in CACI's knowledge of the government acquisition process and the company's expertise in software development making this tool intuitive, easy to learn and usable to a vast majority of source selections and evaluations.

FedSelect® is a low cost tool that standardizes the evaluation process and provides a clear and consistent structure to a wide-range of competitive procurements. This standardization is achieved through the use of four mission-specific modules: Administration, Evaluation, Reports and Consensus. The four modules serve as a roadmap to guide users through the source selection process by documenting findings and constructing rating and rationale summaries that lead to a final award recommendation.

FedSelect® eases the administrative burdens associated with an evaluation by providing:

- An organized evaluation
- Quality assessments
- A complete record to successfully defend against a protest
- Customizable evaluation tool for use on any type of source selection
- Complete, traceable and transparent interim and final documentation
- Contracting Officer access to monitor evaluator's progress in real-time
- Substantial cost savings and time reduction over traditional paper-based source selection procedures

Benefits of FedSelect®:

FedSelect® is an easy to learn software tool with a straightforward user interface eliminating cumbersome training, thus enabling evaluators to efficiently complete evaluations.

FedSelect® helps reduce setup time by making use of existing solicitation information. Once standard information is entered into FedSelect®

it does not need to be re-entered in the future. Only solicitation specific information needs updating.

FedSelect® allows individual evaluators to review their strength and weakness comments on the same page as their rating rationale. This saves evaluators time by allowing them to simply apply pertinent comments directly into their rating rationale leading to stronger overall supporting documentation.

The evaluation team is able to immediately begin the consensus process at the end of the individual evaluations because user inputs are compiled immediately and automatically.

Source selection officials can monitor the evaluation in real time and provide feed-back to evaluators. Providing for more robust and on-point evaluations.

FedSelect® minimizes the need for paper. All proposal documents can be accessed within FedSelect®. Additionally, all reports generated in FedSelect® can be saved electronically in place of printing.

The New FedSelect® v.4.0

- The graphical user interface (GUI) has been redesigned for a more intuitive, user friendly and consistent appearance.
- Allows evaluators to easily view Proposal Documents, Request for Proposal (RFP) and any other source selection documents within FedSelect®.
- Allows evaluators to assign a separate rating to subfactors.
- Allows the evaluator to associate strength or weakness comments to paragraphs in the Statement of Objectives (SOO), Statement of Work (SOW) or other supporting documents offering greater sort/filtering capability while evaluating.
- Contracting Officers have summary data of all evaluator's proposal evaluation progress and current users logged into the system.
- Allows Contract Officers and Leaders to evaluate proposals under their own login, in addition to maintaining their management roles.
- Allows users to generate FedSelect® reports on-screen and export them to Microsoft Word or Excel. Users can also generate ad hoc reports so that specific information can be displayed in a combination of formats.

Source Selection Facility

CACI maintains secure source selection facilities. The facilities come complete with secure networked computers and evaluation document storage.

Competitive Acquisition Support Services

CACI acquisition support services are available well before the source selection begins. The services provided by the CACI acquisition team include: FedSelect® software support, acquisition planning, solicitation materials support and requirements definition, source selection evaluation support, post-evaluation support, award documentation, and other services as needed.

Purchasing FedSelect®

FedSelect® and CACI's Competitive Acquisition Support Services are available on the GSA/MOBIS Schedule: GS-10F-0226K.

Commercial rates are available at: www.caci.com/Contracts/comm_pricelist.doc

Hardware and Software Requirements

FedSelect® is a Microsoft® Access-based program that can run on any network supporting the Microsoft® Office Suite. FedSelect® can be installed using many common local or remote network configurations including geographically separate evaluations. No additional software or license is required to run the application.
