

CACI Health Analytics

Advancing Operational Effectiveness With Breakthrough IT and Big Data Analytics

CACI's health analytics solutions enable federal healthcare programs to deliver modernized, impactful, and efficient services to federal healthcare payers, patients, and beneficiaries. We leverage our information technology expertise, big data analytics, and innovative data management to inform the business operations of our federal health agency customers on two of the largest healthcare data warehouses in the federal government. We acquire and join complex health data from disparate sources to enable accurate and secure data sharing, healthcare delivery analytics, and population health analysis to optimize healthcare benefits management. By facilitating predictive evaluation of program implementation, we help customers more reliably serve eligible populations.

CACI's innovative analytics solutions provide our federal customers actionable health information. Our health IT domain expertise and recognized success implementing leading technologies transform the way our customers manage beneficiary and care delivery programs.

Benefit Program Analysis

CACI applies innovative big data analytics solutions to the measurement of any aspect of beneficiary program implementation, including eligibility, enrollment, claims, payments, disputes, and appeals. These solutions help agencies optimize benefits program parameters and serve eligible populations more effectively.

Health Insurance and Care Model Adoption

We use large volumes of data ingested from numerous sources combined with emerging techniques and tools for trending, data mining, and predictive analysis. This helps our customers profile healthcare data and discover patterns in health insurance product choices and healthcare model adoption by demographic and other filters.

Clinical Data Consolidation, Analysis, and Research

We assimilate medical encounter data from systems supporting healthcare service delivery into an integrated data repository to enable real-time reporting, decision support, and clinical research of healthcare-related information for monitoring force health protection. Our analytics solutions provide monitoring and reporting, increase quality of care, and enable population health research.

Beneficiary Portal Development and Information Exchange

CACI creates intuitive web portals and front-end applications that provide visualization of analytics results and drill-down for detailed views of raw data. Our solutions enable comprehensive analytics as well as management information reporting and collaboration via standardized, centralized user interfaces.

Health Information Exchange

We provide solutions that enable interoperability of systems containing health-related data throughout the federal government. Furthermore, while data access from agencies interacting with disparate healthcare programs is complex and shifting, our IT solutions facilitate accurate and secure data exchange between and within agencies.

INFORMATION DEPLOYED.
SOLUTIONS ADVANCED.
