Increasing Efficiency and Productivity for the U.S. Army Through Business Systems Integration

Since CACI’s founding more than 50 years ago, support for America’s Armed Forces has always been a vital component of our service to the nation. Today, projects for the Department of Defense account for nearly 80 percent of CACI’s work in the federal marketplace. And a substantial portion of these activities support the U.S. Army. In 2011 alone, CACI performed more than $1.1 billion in Army work across over 200 contracts. From ground-based surveillance systems and IED detection technology to C4ISR and business systems, CACI remains front and center with the people, technologies, and solutions to help the Army achieve its most critical missions.

A Successful History as an Army Industry Partner

We have proven experience in successfully integrating a wide range of key information systems for the Army across all major commands and agencies in the following domains:

- Budgeting
- Financial management
- Contract writing
- Logistics
- Readiness and ammunition management
- Command and control
- Intelligence analysis
- War gaming
- Battle staff analytic, training, and course of action simulation

Quality Credentials Provide Confidence in Superior Results

CACI’s U.S. Operations have achieved a CMMI® Maturity Level 3 rating enterprise-wide, reflecting superior delivery of software and systems engineering. Our innovative approach leverages our existing processes to maximize utilization of best practices, contributing to project success, customer value, and CACI competitiveness.

Other credentials include the ISO® 9001 series, a globally accepted quality management standard, and ISO® 20000, which offers customers a benchmark for assessing service levels, measuring performance, and implementing continuous improvement.

Wide-Ranging Solutions Support

- **RM Online:** This web-based integrated resource management system for budgeting, manpower, and personnel helps leverage the full value of complex resource management processes for several major Army commands.
- **Force Management System (FMS):** This solution serves as the focal point for managing Army Force Structure and Manpower, while supporting more detailed manpower documentation.
- **U.S. Army Reserve Engineering and Base Operations Support System (ENBOSS):** Supporting projects at 1,500 Army locations worldwide, this solution has demonstrated a 70 percent time savings in military construction requirements analysis.
- **Chief Army Reserve Decision Support System (CARDSS):** This system provides the Chief of the Army Reserve with executive-level information across a range of areas for which the Chief needs to make executive-level decisions on an ongoing basis.
- **Army Readiness Management System (ARMS):** This online executive information system provides fast and effective access to comprehensive, secure readiness information for any Army unit, anywhere in the world.
- **Installation Status Report (ISR):** This decision support system provides status reporting for Headquarters, Department of the Army leadership, Installation Management Command Regions, and reporting staffs with information related to an installation’s permanent/semi-permanent real property, major environmental programs, and major service activities.
- **Theater Enterprise-Wide Logistics System (TEWLS):** CACI developed this SAP®-based ERP system that supports Army and joint-service medical logistics.
- **Wide Area Workflow (WAWF):** This true e-Commerce system mediates the receipt and acceptance of vendor invoices and authorizes their payment.
- **Standard Procurement System (SPS):** Used throughout the Army to manage procurements, SPS automates contract writing and the full workflow cycle from RFP issuance through contract award and closeout.
