Business Systems Integration
Increasing efficiency and productivity for the U.S. Air Force

For scores of organizations in the defense sector, CACI is the leading choice for comprehensive and complex business systems integration that provides measurable benefits, including reduced costs, increased efficiency, and performance excellence.

We deliver cost-effective business systems across federal domains, and help our customers turn data into actionable information. Combining innovative technology with deep knowledge of government enterprise systems, we provide strong project management that mitigates risk.

We have proudly served the Air Force for nearly 50 years. Our support is built upon an enduring partnership successfully integrating a wide range of key systems that support major commands and Air Staff organizations.

A Fortune World’s Most Admired Company
Wide-Ranging Solutions Support

CACI provides systems development and support on numerous contract vehicles for the Air Force Lifecycle Management Center (AFLCMC), Air Force Financial Management and Comptroller (SAF/FM), Air Force Sustainment Center (AFSC), and Air Force Acquisition (SAF/AQ), among other clients. Here is a sampling of system solutions we have developed, sustained, or supported:

- **Automated Funds Management System (AFM)**: CACI developed and sustained this online database that enables tight control of the distribution of all budgeted funds from the Secretary of the Air Force level to all major commands.

- **Combat Ammunition System (CAS)**: CACI developed and sustained this logistics/supply system, which manages the inventory of all Air Force combat ammunition worldwide.

- **Defense Enterprise and Accounting Management System (DEAMS)**: CACI performed critical independent verification and validation services for a large Oracle ERP integration program to improve the quality of a new core financial management system for use throughout the Air Force.

- **Enterprise Environmental, Safety, and Occupational Health Management Information System (EESOH-MIS)**: CACI has developed, implemented, and sustained activities in support of the transformation of ESOH management to a fully-integrated EESOH-MIS for use by the Environmental, Safety, and Occupational Health functional communities of the Air Force.

- **Exhibit Automation System (EAS)**: CACI developed and continues to sustain this system, which substantially eases the production and submission of budget exhibits for several appropriation types for the Air Force, Air National Guard, and Air Force Reserves.

- **Job Order Cost Accounting System (JOCAS) II**: CACI sustains a system enabling managers to monitor labor and other direct and indirect costs more efficiently and better manage Air Force projects.

- **Keystone Decision Support System (KDSS)**: CACI enhanced and continues to sustain a sophisticated business intelligence system for the Air Force Material Command that enables better decision-making surrounding the Air Force’s working capital fund for more efficient pricing, purchase, and inventory of spare parts.

- **NexGen IT**: CACI is developing a system that modernizes and increases the efficiency of the way the Air Force manages facilities worldwide in support of the Air Force Office of the Civil Engineer.

- **Purchase Request Process System (PRPS)**: CACI sustains this web-based system that automates the front end of the acquisition process, obtains electronic fund certification from the Accounting and Finance System, and electronically transmits the entire package to contracting in near-real time.

Business Systems Highlights:

CACI’s key areas of federal business systems expertise include:

- Financial management
- Human resources management
- Asset and materials management
- Acquisition and contracts management
- Government enterprise business and shared services
- Administrative and departmental management systems
