Healthcare Delivery Solutions

Transforming patient care by implementing integrated, analytic, standards-based healthcare systems

CACI’s healthcare delivery solutions support nationwide health initiatives to achieve better, more affordable care. Our healthcare IT systems accelerate healthcare transformation to improve the delivery of care and support improved patient outcomes. From the development of custom software applications to the seamless integration of industry-leading Commercial Off-the-Shelf (COTS) products for mobile, big data, telehealth, healthcare analytics, and secure cloud environments, CACI furnishes requirements-driven architecture, design, testing, implementation, and semantic services to achieve success for our customers.

A Fortune World’s Most Admired Company

INFORMATION DEPLOYED. SOLUTIONS ADVANCED. MISSIONS ACCOMPLISHED.

CACI
EVER VIGILANT
Healthcare Delivery Systems: Highlights

- Care Management Solutions – Enterprise Resource Planning (ERP) and Customer Relationship Management (CRM), telehealth/telemedicine
- Healthcare Analytics – Secure cloud, mobile, business intelligence, big data
- Systems Development Lifecycle Services – CMMI®, Agile, Scrum
- Systems Integration for COTS and GOTS Healthcare Systems – Medical scheduling, oncology, Electronic Health Records (EHR)
- Secure, Standards-Based Health Exchange – CCD®, HL7®, FHIR®, LOINC®
- Information Assurance – HIPAA and HITECH compliance, software assurance
- Currently supporting the Department of Defense Military Health System, Department of Veterans Affairs, and Department of Health and Human Services

Our customers count on us for transformative healthcare solutions that support the management and delivery of vital medical services.

CACI's thought leadership and innovative healthcare solutions serve as a patient-centered care enabler in any healthcare setting.

EHR Integration: Patient records are transitioning from paper to electronic files, but the lack of interoperability between systems today means that service providers are not able to seamlessly exchange patient information. CACI is addressing this challenge through the integration of standards-based Electronic Health Records that begin with the first day of a service member's military career through veteran care.

Healthcare Analytics: CACI applies analytic techniques to all aspects of federal healthcare, increasing accuracy and timeliness of predictions and enabling proactive patient care.

Business Process Re-engineering: One of the major challenges in American healthcare today is the ongoing transformation into the digital age – and the key to this transformation is Business Process Re-engineering (BPR).

Software Engineering: CACI’s agile, standards-based software engineering services ensure value for our customers. Our "think big, start small, scale fast" approach means that we use an iterative, dialogue-driven process to reach a solution and save our federal customers time and money.

Identity Access Management: Accurate patient information is essential to providing the best possible care. CACI's identity access management solutions help service providers manage individual identities, authentication, authorization, roles, privileges, and permissions within or across systems.

Information Security and Assurance: CACI delivers information assurance solutions that provide robust new capabilities and positive returns on investment, enabling federal health agencies to carry out their missions in a secure manner.

EARNED TRUST. EXECUTED SUCCESSFULLY.

CACI’s Information Solutions and Services support national security missions and government transformation for Intelligence, Defense, and Federal Civilian customers. A Fortune magazine World’s Most Admired Company in the IT Services industry, CACI is a member of the Fortune 1000 Largest Companies, the Russell 2000 Index, and the S&P SmallCap 600 Index. CACI provides dynamic careers for over 16,300 employees in 120 offices worldwide.
