

CACI Medical Contingency Operations Support – Medical Logistics Excellence

For over a decade, CACI has provided specialized support to the Military Health System. Through our medical logistics and information technology expertise, we have developed a significant, best-of-breed medical contingency operations support capability for military and humanitarian relief operations worldwide. Our healthcare professionals analyze and provide medical supply and equipment planning for all Air Force combat and support forces; develop and sustain the Defense Medical Logistics Standard System (DMLSS) automated information system; track, sustain, and distribute medical equipment for patient aeromedical evacuation; and maintain deployment-ready and fully outfitted medical treatment facilities that are strategically pre-positioned for use by medical units providing combat medicine.

CACI is currently performing a technical refresh of DMLSS, incorporating business intelligence, interfaces and data warehouse functions, and integrating assemblage management functions into the new centralized web service: LogiCole.

EXPERTISE AND TECHNOLOGY FOR NATIONAL SECURITY

CACI
EVER VIGILANT

CACI Medical Contingency Operations Support: Highlights

- Achieve high state of readiness and reliability through a sustained 98 percent stock availability and greater than 99 percent inventory accuracy
- Manage all information management/information technology and communications components of medical assemblages, including hardware and software to facilitate medical information transfer throughout theater operations
- Provide a single resupply point for any Air Force-deployed medical unit worldwide
- Manage the cold chain, assuring delivery of vaccines and pharmaceuticals safe for use at remote locations
- Maintain and resupply the aeromedical evacuation system's in-flight medical kits and critical care air transport team medical materiel
- Customers include the Defense Health Agency, Army, Air Force, Air National Guard, Air Mobility Command, Air Combat Command, and Air Force Special Forces Command

CACI provides medical assemblages – from backpacks to fully equipped hospitals – to support both comprehensive disaster relief to aid worldwide victims of natural disasters and major contingency operations in military Theaters of Operation. Pre-positioned assemblages and vaccines are maintained at 30 CACI-staffed sites across the U.S. and in the Pacific, with another 70 locations maintained by CACI travel teams.

Our support includes:

- Responding to every major military operation and disaster in the last decade, including Operations Iraqi Freedom and Enduring Freedom in Afghanistan, Hurricanes Katrina and Rita, the Japanese and Indonesian tsunamis, earthquakes in Haiti and Chile, Typhoon Haiyan in the Philippines, and the Ebola outbreak.
- Providing modular, scalable, rapid response mobile hospital packages called Expeditionary Medical Support Systems (EMEDS) for wartime contingencies and humanitarian relief.
- Developing and sustaining the Defense Medical Logistics Standard Support System for comprehensive healthcare supply chain management.
- Stockpiling medical countermeasures for use in the event of a pandemic, chemical, or biological threat to protect service members and their families.
- Ordering, receiving, building, packing, and shipping assemblages consisting of medical equipment and supplies for dispatch to anywhere in the world in a matter of hours.

Case Studies:

In support of the Air Force Operations Agency, we converted a 25-bed EMEDS to an Ebola treatment center for use by the Public Health Service to treat healthcare workers in West Africa. This was the first Department of Defense medical asset to arrive in theater.

Assisted USTRANSCOM and Air Mobility Command with developing and deploying the Transport Isolation System, a new aeromedical evacuation capability that enables movement of multiple patients requiring isolation on military cargo aircraft.
