

## **Greenhouse Gas Emissions**

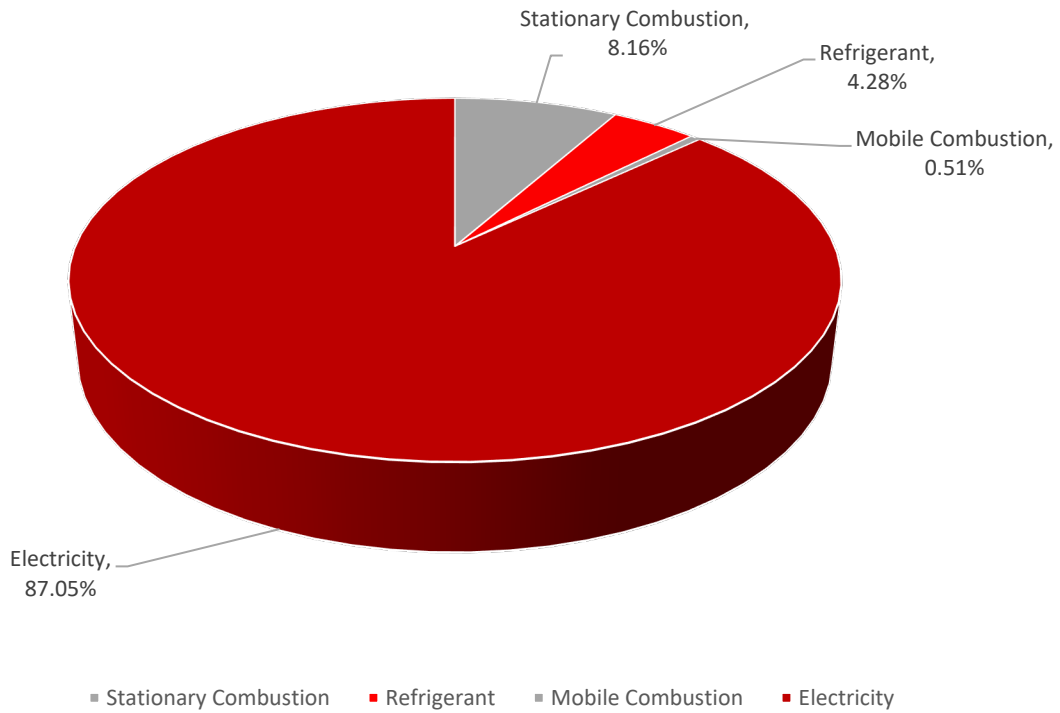

CACI International measured and established a baseline of our greenhouse gas emissions for Calendar Year 2019, consistent with the Greenhouse Gas Protocol developed by the World Resources Institute and World Business Council for Sustainable Development. CACI worked with a third-party consultant to develop and review the greenhouse gas inventory for completeness and accuracy.

In calendar year 2019, CACI's Scope 1 and 2 emissions for all facilities leased and controlled by the company measured approximately 33,395 metric tons CO<sub>2</sub>e. The majority of CACI's emissions are from the electricity used in the facilities we lease. Other sources include use of natural and other gases, fuels used in our owned and leased vehicles, and refrigerants used in our building and supplemental HVAC systems.

<b>GHG Characteristics</b>	
<b>Facility Locations</b>	Worldwide
<b>Facility Types</b>	Office, Product assembly
<b>Base Year</b>	2019-2020
<b>Total Facilities</b>	150
<b>Scope 1 and 2 estimated GHG emissions</b>	33,394.3 metric tons CO <sub>2</sub> e
<b>Main sources of GHG emissions</b>	Electric usage at CACI facilities
<b>Other sources of GHG emissions</b>	Stationary Combustion (including natural gas usage) and refrigerants
