From Boots to the Boardroom

Virginia’s veterans are a natural fit for corporate headquarters

VIRGINIA IS HOME to 35 military installations and more than 720,000 veterans. It’s also home to 35 Fortune 1000 companies (eight among U.S. states) and 2,350 corporate headquarters operations (44 states). Veterans are well suited to transition from boots to the boardroom, and many who serve in the state want to stay.

According to the U.S. Department of Defense, 21,219 service members separated from military service in Virginia in fiscal 2019, second only to the economy behind California. Last year, WalletHub ranked Virginia No. 1 for veterans looking to retire, based on healthcare facilities, quality of life, and the Commonwealth’s strong economy.

"It's a win-win-win. The service member, the corporate win, and the community win," said Yozell Mattocks, executive director of the Veteran Employment Initiative at the Northern Virginia Technology Council.

Their mix of technical and soft skills make veterans a great choice for employers, and the Commonwealth has recognized the workforce and veteran regions and taken steps to leverage that advantage.

VETERANS AND VIRGINIA: A PERFECT MATCH

The same strengths that make Virginia a great state for business make it a great fit for service members. The merger of the Commonwealth’s diverse economy and its military footprint come together on the map. Virginia’s three major economic hubs of Hampton Roads, Northern Virginia, and the Roanoke-M收集 are each anchored by large military installations.

Northern Virginia is home to the Pentagon, Fort Belvoir, Marine Corps Base Quantico, and Joint Base Myer-Henderson Hall. Fort Lee is south of Richmond, near Petersburg. Hampton Roads is home to more than 62,000 active-duty military across seven naval installations (including Naval Station Norfolk, the world’s largest naval base), two U.S. Army bases, four U.S. Coast Guard installations, a U.S. Marine Corps Forces Command, and Langley Air Force Base. Veterans exiting military service from these installations depart with a diverse range of professional skills and expertise, from logistics and cybersecurity to finance protection and program management. In addition to professional qualifications, soft skills reign supreme for service members.

"Veterans are going to be on time, say until after the battery and be there until the job is done," said Kenneth Tyler, Virginia Valley Veterans (VV) regional program manager, Northern Virginia. "It's basically muscle memory.

For Virginia companies, it often comes down to dollars and cents, as well—hiring veterans can help a company’s bottom line. "You're going to save on training costs. You're going to save on clearances. We come to work on time," said Tyler, who served in the U.S. Marine Corps as a military policeman. "We're good decision-makers."

"If you've got 40,000 employees, your most important lever with your employees is how good are you at the craft of leadership," said Mike Peters, CEO of Newport News-based Fortuna 500 shipbuilding company Huntington Ingalls Industries. "And veterans bring that experience with them in a way that a lot of other parts of our society just don't."
CULTURE MATCH

The military culture aligns well with a corporate headquarters environment, where good judgment and professional values are vital. That culture is one of the reasons CACI International Inc., a professional services and information technology company headquartered in Arlington County, has made a commitment to veteran hiring, with veterans or military members comprising 27% of its workforce (including military spouses, National Guard, and reserves).

“[The reason we are doing all of this is because of the value that veterans and military bring to CACI and to our customers,” said Gary Fenton, vice president of veteran and military affairs at CACI. “We recognize and appreciate the leadership, self-discipline, the training, the work ethic, the integrity, and, in many cases, the security clearance they bring to our company. They match our company with all of these values and attributes, in addition to their experience and their skill sets, and they help make us successful in supporting our customers in the national security space.”

For a company like CACI, with a significant portfolio of government and military customers, hiring veterans just makes good business sense. Fenton says he couldn’t imagine the company without its veteran population. “It’s part of our culture. It’s part of our DNA, and it’s ingrained in everything we do.”

Mamolo notes that a lot of desirable qualities which aren’t easily vetted in a traditional interview process generally shine in the veteran community.

“A person who has volunteered to serve probably brings some soft skills that we don’t often talk about — their home value, integrity,” Mamolo said. “We don’t use that in common terms or in an interview question, but veterans possess that highest level of commitment and the courage to say: ‘Hey, I don’t know that’ — the courage to be truthful. That brings trust pretty fast, and that’s critical for any organization.”

Veterans are an obvious fit for the defense industry, where security clearances are often required and knowledge of government culture is a plus. But Virginia businesses are creating innovative programs to help attract and retain qualified veterans.

Jack McCardell, a military recruiter at Goochland County-based auto retailer Carl Max, estimates that 10% of his company’s hires each year are veterans, and he believes that number will rise based on the company’s work with organizations like the U.S. Chamber of Commerce’s Hiring Our Heroes. In February, Alamo.com, headquartered in Laurel, Colorado, began the second year of its G.R.I.T. apprenticeship program for veterans. The apprenticeship is a two-year paid program that provides full employee benefits, including on-the-job and classroom training and industry certifications.

The Virginia government also offers programs to help veterans find post-military employment. For example, the V5 program is a free training and education program operated by the Virginia Department of Veterans Services. To date, V5 has helped more than 15,000 veterans get hired. The organization offers a free certification program to help employers attract and retain veterans.

WILL WORK FROM ANYWHERE

With the COVID-19 pandemic continuing to affect the workforce, veterans are ready to stand out in corporate offices in other ways — by showing up and getting the job done regardless of their office location.

“In the virtual environment, you have less supervision than in the direct, live office space, and veterans make great employees,” Fenton said.
