

RMF Eagle Toolset

CACI's Risk Management Framework (RMF) Eagle is a multipurpose, comprehensive toolset that simplifies and improves customers' capability to protect their vital information networks. Our expert-developed toolset significantly automates the population of reports necessary to comply with the Department of Defense's (DoD) RMF assessment and authorization process. RMF Eagle provides a customizable cloud-based software that includes all current Defense Information Systems Agency (DISA) Security Technical Implementation Guides (STIGs) and Security Requirements Guides. This toolset enables our customers to seamlessly transition to the next generation of RMF requirements.

RMF Eagle increases efficiency, reduces time, and saves cost in achieving authorization and keeping information secure while providing a real-time plan of action and milestone status of the system process. RMF Eagle has been used across the government in multiple programs to support the compliance and accreditation process as a mission enhancement tool for developing system security artifacts and requirements.

A *Fortune* World's Most Admired Company

EXPERTISE AND TECHNOLOGY FOR NATIONAL SECURITY

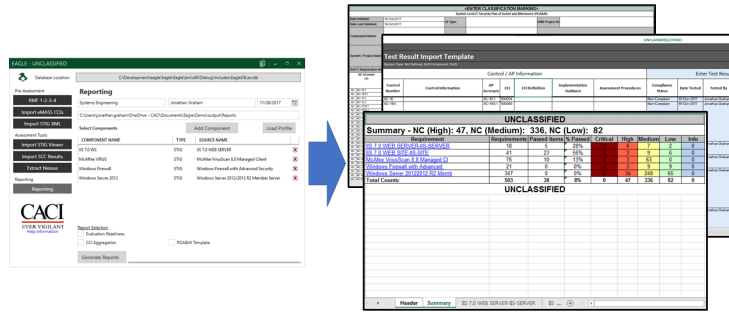

CACI
EVER VIGILANT

Features

- Able to custom-fit requests and enhancements in a timely manner
- Prompt updates of DISA requirements into all reports
- Adaptable to include agency overlays
- Provides a program management dashboard for a snapshot of overall cybersecurity compliance posture
- Can be accessed via the CACI cloud for easy accessibility and data security
- Accreditation process
- Flexibility to customize and optimize toolset to customers' specific requirements

Benefits

- Increases efficiency, reduces time, and saves cost in the process of achieving authorization
- Simplifies the process of transferring to RMF
- Enhanced capability to limit the vulnerability of customers' information systems
- Customized to meet DoD RMF assessment and authorization software security requirements
- On-the-fly report generation allows for continuous monitoring at a glance with the most recent data entered for a system
- More efficient execution of current work

RMF Eagle builds the documentation necessary for customers to gain authorization to operate in compliance with all federal information security standards under the new DoD Risk Management Framework.

CACI RMF Eagle Toolset Capabilities

- **Rapid Application of STIG Requirements:** RMF Eagle quickly imports STIG requirements and applies them to generating RMF reports for information systems to achieve authorization. Once STIG requirements are uploaded, the tool automatically updates these requirements for all reports in a customer's IT network, so networks are continually up to date. The tool processes Nessus IT network security vulnerability scan results; Security Content Automation Protocol compliance checker results; and common correlation identifiers (CCIs) that ensure security controls are compliant with DISA standards. RMF Eagle further analyzes STIG implementation to ensure the effectiveness of mitigation of network security vulnerabilities.
- **Security Control Identification:** RMF Eagle supports the identification of security controls and CCIs released by DISA that are applicable to a specific customer's information system, as well as additional security controls requested by customers. These security controls ensure that customers meet their required level of data confidentiality, integrity, and availability.
- **STIG Assessment Efficiency:** RMF Eagle automatically captures and lists all STIG controls in a customer's information system in order to facilitate the required manual assessment of STIGs by regulatory agencies. It then automatically maps all STIGs to their associated CCIs and security controls to further facilitate this process.
- **Offline Report Generation:** The RMF Eagle toolset enables customers to manually add customized security controls for evaluation results reports, security assessment reports, risk assessment reports, and plan of actions and milestones.
- **Flexible Framework:** RMF Eagle is entirely customizable to meet the customer's specific requirement. The toolset is also adaptable to new DISA RMF capabilities as they evolve, including RMF system categorization review and data import from and export to the Enterprise Mission Assurance Support Service workflow tool, through which reports are sent for approval.
