

## The Next Evolution of Data Analytics

Artemis is a commercial-off-the-shelf (COTS) massive data platform from CACI, developed by the analyst, for the analyst.

CACI has worked for decades with a myriad of U.S. Government partners in the Intelligence Community, Department of Defense, and law enforcement to transform our subject matter expertise in full-spectrum intelligence analysis, software development field support, beta testing, and full-scale deployment/operations of critical platforms into unequaled big data analysis capability for our U.S. Government customers. Our battle-tested technologies, real-world approach, and ongoing end-user collaboration has resulted in an agile, powerful tool for your data. Artemis supports multiple analytical use cases and workflows. Artemis will evaluate content to reveal what our customers are looking for and will push alerts to the appropriate users in real time.

This is data analytics at scale – a platform for rapid data discovery and visualization of massive amounts of data in one place. **Artemis is your single source to hunt for your needle in the needlestack.**

A *Fortune* World's Most Admired Company

EXPERTISE AND TECHNOLOGY FOR NATIONAL SECURITY

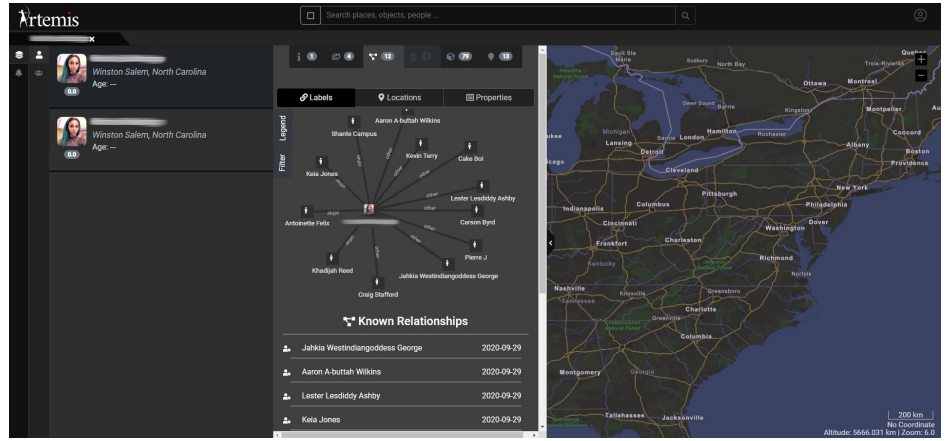

**CACI**  
EVER VIGILANT

## Features

- Fills information gaps quickly and efficiently, identifies centers of gravity in your data, and informs decision makers
- Integrates public, commercial, and proprietary streams of data out of the box
- Offers a scalable, cloud-based architecture that speeds up searching, extracting, and organizational processes to present useful visualizations and enable critical decision-making
- Adaptable and extendable, rooted in a modular object store and streamlined user interface

## Benefits

- Makes massive data sets discoverable, interoperable, and sharable with other technologies
- Provides microservice infrastructure for enterprise level integration of tools and data
- Provides powerful analytical insights for a specific geographic area, anywhere in the world
- Normalizes disparate data streams to make information relevant and actionable
- Searches across the digital domain to quickly visualize data sets
- Funnels data sources by time, geospatial constraints, or keywords down to manageable volumes; assists analysts in narrowing the aperture to an issue, area, or entity

## Your Hunting Partner to Find Your Needle in the Needlestack

Artemis is a scalable cloud-based solution that helps customers meet their missions when it comes to analyzing and making sense of massive datasets. Its unique analytic DNA enables it to aggregate data from endless sources.

Artemis is designed to search, organize, visualize, analyze, and collaborate – freeing analysts from repetitive data manipulation tasks and stove-piped “toolbox” workflows to perform their primary job – analysis.

As information is discovered, Artemis organizes the data into standardized fields, populating an underlying object store, to help the analyst understand the context around people, groups, organizations, places, and events.

**Built upon our advanced analytic and artificial intelligence expertise, Artemis is the latest innovative technology developed by CACI to meet our customers’ most critical needs.**
