

FeatureTrace[®]

AI-Automated GEOINT Feature Extraction

CACI is proud to offer geospatial-intelligence (GEOINT) analysis that utilizes its proprietary FeatureTrace[®] technology. GEOINT regularly requires hours of painstaking work by analysts to process, exploit, and disseminate imagery. Many of these tasks have, until now, required human analysts to manually examine imagery to identify and extract key elements such as "foundational features."

CACI's FeatureTrace technology and expertise revolutionizes the discipline of GEOINT analysis. Using deep learning and artificial intelligence (AI) tools and algorithms, the FeatureTrace tool saves hours of valuable manpower by automatically collecting key satellite and overhead imagery road features (and will soon be able to collect other imagery features, like buildings, and bodies of water). These features are then provided to CACI GEOINT analysts to conduct rapid foundational feature reviews.

Instead of manually identifying these features, a CACI GEOINT analyst now only has to quality check the processed imagery. With FeatureTrace, once complex and time consuming tasks, like manually identifying road transport networks, can now be done in a fraction of the time.

A *Fortune* World's Most Admired Company

EXPERTISE AND TECHNOLOGY FOR NATIONAL SECURITY

CACI
EVER VIGILANT

Features

- FeatureTrace extracts roads from imagery using the power of neural networks, which examine and interpret images similarly to humans
- FeatureTrace can extract roads from 3-channel RGB satellite imagery in one-minute-by-one-minute tiles in under two minutes, a process that could take an analyst up to 10 hours to conduct manually
- Networks trained using analyst-identified imagery and data, enabling the neural network to label all pixels in an image with high accuracy and precision
- FeatureTrace converts the output from the neural network into geospatial vector data usable on multiple geographic information system platforms

Benefits

- FeatureTrace generates rapid feature extraction and vector-to-vector change detection, facilitating effective, continual data enrichment that will lead to steady-state Map of the World (MoW) maintenance
- FeatureTrace introduces automation into an analysts workflow early on, allowing them to focus on producing more efficient, effective, and accurate GEOINT
- Powerful AI and deep learning tools save hours of time and personnel expenditures by performing feature extraction in minutes

How FeatureTrace Improves GEOINT

CACI's FeatureTrace automates the foundational feature extraction process using powerful new software tools that break down satellite and overhead images into smaller pieces, resulting in the FeatureTrace raw dataset. CACI's specialized neural network processes these image pieces, identifying features with 97 percent accuracy.

Afterward, a CACI GEOINT analyst examines the resulting FeatureTrace raw dataset for quality control, matching it to imagery and adjusting the vector data accordingly to produce the FeatureTrace final datasets. By allowing our analysts to focus on the quality control portion of the process, and not time-consuming manual extraction that often takes hours, CACI's FeatureTrace technology helps imagery processing become exponentially faster and more effective.

Road Map for FeatureTrace Enhancement

CACI's AI and deep learning experts will continue to improve and refine FeatureTrace's unique analysis capabilities. Beyond collecting road features, CACI is working on adding FeatureTrace extraction capabilities that specifically identify buildings, waterways, and powerlines in imagery. Attribution will also be a key focus. Future improvements and enhancements planned for FeatureTrace include:

- Perfecting FeatureTrace's road detection capabilities
- Multiple feature class detection (such as points of interest, bodies of water, and land cover)
- Subclass feature identification (distinguishing roads versus cart tracks, for example, and highways versus local roads)
- Vector-to-vector change detection
- A steady state of continuing maintenance driven by automation and AI
- Regional FeatureTrace GEOINT expertise - FeatureTrace will continually train for region-specific nuances

EXPERTISE AND TECHNOLOGY
FOR NATIONAL SECURITY

At CACI International Inc (NYSE: CACI), our 23,000 talented and dynamic employees are ever vigilant in delivering distinctive expertise and technology to meet our customers' greatest challenges in national security and government modernization. We are a company of good character, relentless innovation, and long-standing excellence. Our culture drives our success and earns us recognition as a *Fortune* World's Most Admired Company. CACI is a member of the *Fortune* 1000 Largest Companies, the Russell 1000 Index, and the S&P MidCap 400 Index. For more information, visit us at caci.com.
