

DARKBLUE INTELLIGENCE SUITE

DarkBlue

Reveal hidden data to drive your mission

Powered by robust data collection and in-house experts, the DarkBlue Intelligence Suite® is a software as a service (SaaS) platform that offers a cutting-edge user interface (UI), designed to revolutionize how analysts perform open source intelligence (OSINT) on the open, deep, and dark web. Our platform lets you access and interpret critical data from obscure domains and deanonymize bad actors.

Accelerate your investigations

With its intuitive UI that's integrated with AI and ML capabilities, our platform enables you to jump the learning curve traditionally associated with dark web investigations.

Uncover hidden identities

Leverage our powerful deanonymization and AI-empowered technology to gain insights on the identities behind monikers and other selectors with the communications and personas of bad actors.

Tailor your data collection

Take control of data collection by locating what matters most using a platform that preserves all collected data so you can effectively spot connections and patterns.

Gain accurate and efficient insights

Swiftly alternate between your search findings and the live environment using DarkPursuit, which lets you access data from open, deep, and dark environments with ease.

DISCOVER. PURSUE. ENGAGE.
